

Water Quality Day

August 19th, 12-4 p.m., Alcona Fair Grounds

From your well to the river and from the **farm** to the **forest** water plays a vital role in all of our lives. Join the Alcona Conservation District at the Alcona County Fair to learn more about your water and how you can protect it!

Have your drinking water tested:

Few things in life are more important than the water you drink. Are you sure that your well water is Nitrate and Nitrite free? Bring us a sample of your home's drinking water and we can help you solve the age old question "what's in the water?". Check out alconaconservation.org for details and directions on how to collect a water sample.

Ever wonder what role the forest plays in the water cycle, your drinking water supply, the health of our fisheries, or how timber harvesting effects water quality? Come on out and learn how wise land management can play a big role in protecting Michigan's rivers, lakes and streams

Farms and Watersheds:

The concept of a watershed can be a bit confusing, but it's important to understand. Join us and explore some interactive displays that will demystify watersheds and leave you with a better understanding of how your actions effect our watersheds. Whether you're a farmer or a forest owner, you can positively impact everyone's water quality.
